A²
comprising a universal record locator and originating at a first computing device, said universal record locator having information relating to an electronic content item, said information being included in said universal record locator in an encrypted form;

decrypting said encrypted information; and

providing said electronic content item to said first computing device

based at least in part on at least some of said information.

27. A method of providing an electronic content item, said method comprising the acts of:

A³
receiving, from a first computing device, a first cryptographic key;

retrieving said electronic content item from storage, said electronic content item comprising encrypted content decryptable with said second cryptographic key;

encrypting said second cryptographic key with said first cryptographic key to produce an encrypted cryptographic key;

including said encrypted cryptographic key in the retrieved electronic content item; and

transmitting, to said first computing device, the retrieved electronic content item including said encrypted cryptographic key.

A⁴
38. A method of preventing unauthorized distribution of content, said method comprising the acts of:

Art Unit: 2132

A⁴
receiving a first communication from a first computing device, said first communication comprising first encrypted information, said first communication being initiated at said first computing device based on a first universal record locator, said first universal record locator comprising an address of said first computing device and said first encrypted information, said first encrypted information comprising first time information;

decrypting said first encrypted information to retrieve said first time information;

determining, based on said first time information, that a time limit has not expired; and

providing a first electronic content item to said first computing device.

A⁵
46. A method of electronic distribution, said method comprising the acts of:
a first party receiving an order for an item from a third party;
said first party creating information relating to said item;
said first party encrypting said information with a secret to produce encrypted information, said secret being shared between said first party and a second party;

50. A method of providing content item individualized for a user, said method comprising the acts of:

A⁶ retrieving, from a storage device, a content item, said content item comprising: meta-data, a decryption key sealed with said meta-data, and encrypted content decryptable with said decryption key;

unsealing said decryption key;

adding at least some personal information pertaining said user to said meta-data to produce new meta-data; and

resealing said decryption key with said new meta-data.

A⁷ 55. A download server adapted to deliver electronic content to client devices, comprising:

Art Unit: 2132

a validation module that validates incoming requests for the electronic content;

A⁷ a content store module that determines a location on the download server of the requested electronic content;

a security level determination module that determines the level of protection the electronic content is to receive; and

a sealing module that seals the electronic content in accordance with a determined level of security for downloading to the client devices.

60. A method of preventing unauthorized distribution of content, said method comprising the acts of:

A⁸ receiving a first communication from a first computing device, said first communication comprising first encrypted information, said first communication being initiated at said first computing device based on a first HTTP request, said first HTTP request comprising an address of said first computing device and said first encrypted information, said HTTP request further comprising a hash of said first encrypted information computed prior to the encryption of said encrypted information;

decrypting said first encrypted information;
